Deck 140/26
Standard Sizes

Width 140 mm
Size 4000 mm
Thickness 26 mm

Deck 140/22
Standard Sizes

Width 140 mm
Size 4000 mm
Thickness 22 mm

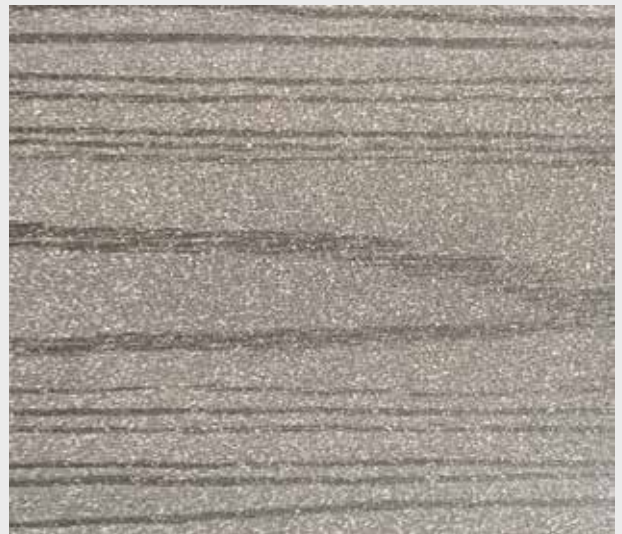

Both surfaces are suitable for use.

This allows you to replace the old surface with the substrate and use it as a new surface.

It both saves the cost of renewal and adds innovation to your space.

Size 4000 mm
Thickness 9 mm

Composite deck systems offer the warmth of wood and the durability of the polymer. The service life of wood applied outdoors is very limited. You have to care for your wooden floor covering twice a year with varnish and other chemical preservatives. Over time, the screw ends come out, moisture makes the wood surface slippery. Not only the initial cost of wood, but also high maintenance costs in the long run create problems for you. Against all these problems, our composite deck systems are the ideal solution you are looking for.

The flooring you need in both landscape areas and pool sides should be durable, safe and long-lasting.

HIDDEN CLIP SYSTEM, VERY EASY TO USE

Whether it is stainless steel or plastic, composite decking applications are a solid, fast, practical and ideal solution thanks to the hidden clip system. This system also allows you to change the profile you want without any damage.

NON-SLIP SURFACE

Composite deck systems that we produce with high quality wood particles and special surface treatments provide a safe and non-slip surface on terraces, poolsides, marinas and all wet places.

RESISTANT AGAINST OUTDOOR WEATHER CONDITIONS

It is resistant to all weather conditions. Deck profiles maintain their physical properties without causing any problems even in sudden temperature changes. It is not affected by water, humidity and humidity.

ENVIRONMENTALLY SENSITIVE

In our world where environmental awareness is increasing day by day, wood composite stands out as the most nature-friendly solution for outdoor landscape and facade applications. Our company is an excellent wood composite product that combines advanced and innovative production technology with efficiency, environmental compatibility and high quality. Tropical tree species used in outdoor applications cause inefficient and excessive natural resource consumption. Deck profiles, which the wood industry converts into a value-added product by using their waste, are 100% recyclable materials.
